TitanCeram is an innovative material by Villeroy & Boch that incorporates all the experience we have gained in more than 260 years of ceramic manufacture. It was developed specifically for high-quality, premium designs. For the first time, TitanCeram permits the creation of products with a unique, precise design and extremely thin walls, sharply defined edges and all the advantages of high-quality ceramics. This is due not only thanks to special production steps but also the particular composition of clay, quartz, feldspar and titanium oxide. TitanCeram – the material for unusual design highlights of the best possible quality.
