TWISTFLUSH $[e^3]$

Maximum vortex power at an attractive price

A TOP-QUALITY SOLUTION AT AN ENTRY-LEVEL PRICE

THE NEW VORTEX FLUSH FOR PROJECT BUSINESS

Vortex flushes are regarded as the most advanced flushing technologies on the market. With the new TwistFlush[e³], Villeroy & Boch has now developed a special version of the vortex flush technology for use in public and commercial sanitary facilities and residential construction projects. TwistFlush[e³] creates value for your clients in three respects: It is **evolutionary. economic. efficient.**

THE TWISTFLUSH[e³] SUCCESS FORMULA

EVOLUTIONARY: Vortex flushes were previously available only in the upper price segment. Thanks to TwistFlush[e³], there is now an economical alternative that is particularly attractive for large construction projects. It contributes to increasing the value of a property as well as upgrading the facilities.

ECONOMIC: TwistFlush[e³] uses less water to achieve thorough and practically residue-free flushing performance and eliminates the need for repeat flushing. This makes TwistFlush[e³] a resource-efficient solution that saves operating costs in the long term.

EFFICIENT: Thanks to the combination of a powerful vortex flush and an intelligently designed bowl architecture, TwistFlush[e³] provides thorough flushing of the entire surface. This eliminates residue which in turn reduces cleaning time and effort.

PRODUCT FEATURES

THE CORNERSTONES OF MAXIMUM EFFICIENCY

Powerful vortex flush

The physical force of the water vortex provides residue-free flushing. For flushing performance with plastic balls, the requirements of the EN 997 standard were exceeded by a factor of 10.*

Complete coverage of the toilet bowl

The precise water flow ensures thorough flushing. The water is channelled into the bowl with almost no splashes. The efficient vortex flush eliminates the need for repeat flushing.*

Reduced flush volumes

At 3/4.5 litres per flush, TwistFlush[e³] is significantly more efficient than systems with 3/6-litre flushes. For a company with 1,000 employees, this represents a potential annual saving of up to 675,000 litres of water.*

Fast cleaning

TwistFlush[e³] toilets are rimless and twice as quick to clean as toilets with a rim.* TwistFlush[e³] allows a company like Villeroy & Boch to save up to €16,000 in cleaning costs per year.

*Confirmed by the wfk-Institut für Angewandte Forschung GmbH / WL 4093A/23

PROVEN PERFORMANCE

Numerous independent tests at institutes such as TÜV Rheinland have confirmed the flushing performance of TwistFlush[e³].
