

# VIFRESH

## Easy. Invisible. Fresh.

The innovative ViFresh technology combines a fresh fragrance and hygienic toilet care in one novel system. It is based on a simple principle: place a conventional rim block or gel in the integrated and almost invisible compartment in the toilet water inlet - to diffuse a pleasant fragrance with each flush.

### Hygiene

- + The optimum solution for combining the latest toilet technology (DirectFlush) with a rim-block
- + Clean freshness with a highly efficient flush, even with an economical water volume of 3/4.5 l
- + As the rim-block/gel is located in the water flow, the entire inside surface of the toilet is flushed with the active ingredients and the holder does not get in the way of the flushing water
- + With each flush, a constant amount of cleaning product is released, regardless of when the flush was last activated
- + Two different holders (one for rim-blocks, the other for gels) for optimum dosage

### Simple handling

- + Simply fill the integrated holder with the care product without touching any of the unhygienic areas of the toilet, such as the rim or the bowl
- + Works with standard products available from any supermarket
- + Compartment is difficult for children to access
- + The holder is easy to clean, simply rinse it under running water

### Available range

- + For Subway 2.0 Standard wall-mounted toilet
- + Optional extra
